LEVERTON'S ECO-HEARSE

The UK's first Electric Hearse

INVESTORS
IN PEOPLE

Accredited
Until 2019

Golden Charter 

Leverton & Sons pioneered, commissioned and produced the UK's first all-electric Eco-Hearse in 2013.

Since then the Eco-Hearse has proven very popular with our clients providing them with an option for a modern and environmentally friendly funeral in and around London. It takes a full size coffin but is different to the traditional hearse and due to its more discreet design in comparison it is often selected for aesthetic as well as ecological reasons.

The Eco-hearse is now popular with other funeral directors who have since ordered their own to offer to their clients.

It's zero emissions battery can easily manage woodland burials at Epping in Essex and the Chilterns in Buckinghamshire. It will travel 85 miles on a single charge, but for funerals further afield, our conventional Jaguar Daimler hearse might be more suitable.

The Eco-Hearse is based on a Nissan Leaf. In partnership with Clive Leverton, designer Steve Cousins chose the leaf because of its intelligent engineering, rapid battery charging and its long distance single charge capability.

We have since added a Nissan Leaf Saloon to our vehicle fleet to function as a passenger car for mourners and bearers.

This innovation won us the Best Green Funeral Director Title in 2013,

and again in 2017, awarded by The Good Funeral Guide and we were also shortlisted for the 2015 Camden Business Awards 'Carbon reduction and energy efficiency' category.

We constantly strive to be able to offer our clients what they want. Every funeral we do is different, and we can provide clients with environmentally friendly funerals that are delivered with the same high quality of care and personalisation.
